

# Solving Bad Water Problems

Our goal is to find products that reduce your water usage; are eco-friendly; increase the life cycle of your plumbing, pumps and machinery; and lower maintenance and repair costs.

CASCADIAN® Solutions™ are an easy, effective way to get water treatment in your home or workplace without SALT! Available in two different categories - Fully Automatic or Cartridge Based. Integrated Cartridge Solutions (ICS) are designed for flow rates 5-15 gallons per minute (gpm). Choose from a variety of filter kits to fix problems for taste, smell, hardness, rust, sediment, low pH and Silica. Easy to install. Even easier to maintain. Cartridges are compatible with NUVA systems.

Scale-Pro systems offer electronic impulse technology to provide a long term, hassle-free, cost effective solution to scaling issues. De-scale water pipes and systems used in homes, swimming pools, steamers & boilers, sprinkler systems, and more. Energy costs and water usage are reduced because motors and pumps work more efficiently to move water through the pipelines and system. Salt and chemical-free process.

Elysator filtration systems are used in larger facilities, such as cooling towers, water treatment plants, ships, schools, hospitals, hotels, and agriculture. Elysators use a process called electrocoagulation to get the job done. The Elysator team excels at fixing locations where hard water, sludge, heavy metals and other contaminants make it especially difficult to clean up bad water.

Vulcan systems use electrical impulses to alter the physical properties of calcium, magnesium and other hard metals found naturally in your water supply. The electrolysis effect prevents scale deposits that accumulate inside your pipes, clog your shower-heads and faucets, and leave white spots everywhere. All this with no chemicals or salt!

Multipure offers superior performance, lifetime warranties and money-back guarantees for their line of products. Industry-leading solid carbon block filters provide a way to reduce contaminants that affect the taste, appearance, and quality of your drinking water. Designed for dedicated faucet systems. Choose between countertop or below sink models. Different sizes available with or without monitoring.

The leading national brand in residential filtration systems. As seen on the web, magazines, television ads, and large store outlets. Paramount carries the entire line of Aqua-Pure Water systems and components: dedicated faucet units, reverse osmosis units, in-line filters for refrigeration, full flow systems for entire household, and large capacity systems.
